

The logo for Titanix, featuring a white stylized arch above the word "TITANIX" in a bold, white, sans-serif font, set against a green background.

TITANIX

A photograph of a man in a white shirt working on industrial machinery. The machinery includes a large metal coil and a complex assembly of pipes and valves. The man is looking down at his work with a slight smile.

MADE TO COOL

WE HAVE YET TO SEE AN
ENGINE WE CAN'T COOL

FOCUSED,
FAST AND
FLEXIBLE

Our aftermarket products are made by the same experts the OEMs choose for their new trucks. They appreciate TitanX because we are focused, fast and flexible.

FOCUSED on commercial vehicles – this is what we do and as a market leading OEM supplier, we pride ourselves to be good at it. Our products can be found in six of the 2010-2016 International Truck of the Year winners.

FAST – We extend our range of radiators and charge air coolers after your demands. Right now, our aftermarket catalogue has over 300 products, and counting.

FLEXIBLE – We engineer and manufacture our products for the European market in Sweden. Our products are engineered and manufactured in our highly automated plant in Mjällby, Blekinge, Sweden.

We believe that a truck in trouble quickly deserves the best quality engine cooling. Because uptime rules.
